Personal Statement to Pursue a Career in Medicine? The first time I observed a physician pause during a busy clinic day, it wasn't to review a chart—it was to sit at eye level with a patient who had just received an unexpected diagnosis. The experience has changed my perception of medicine. The doctor showed clinical accuracy and emotional presence, and thus, it is not only about curing the illness, but also about leading the patients in uncertainty. My clinical experiences have consistently reinforced this understanding. In my experience working as a hospital volunteer, I understood how physicians process and analyze complicated data, deliver risk, and make decisions that directly influence the results of patients. The most remarkable thing was the liability of the physicians as interpreting science properly and putting it into practice under duress in a morally sound way. This rational and ethical stringency is what makes me desire the MD pathway. Having completed undergraduate research projects in population health, I have had an opportunity to acquire a good level of analytical and critical reasoning skills, especially in the assessment of clinical evidence and disease trends. I also learned the importance of research in informing clinical guidelines and the importance of physicians in adopting current methods of care provision. This training enhanced my objective judgment of data - a vital skill of the contemporary medical practice. I am a great applicant to the field of medicine as I can apply discipline, scientific interest as well as accountability to every task I consider. Medicine requires accuracy, lifelong learning and ethics- aspects that I have acquired over a period by engaging in progressive academic and clinical work. I am pursuing an MD degree to further enable my science background and be ready to make evidence-based choices and trust my patients all the time.
